

Circular sight glasses

made from borosilicate glass "extra-hard"

From our standard range

Glass		Permiss. PB**) bar	Gasket		
Diameter mm	Thickness mm		O.D. mm	I.D. mm	Thickness mm
31,75	12,7	175	*)	*)	*)
40	12	50	42	30	1,5
45	10	40	47	32	1,5

Dimensions not in DIN 7080 or OeNORM M7353

*) Gasket set and micas for high-pressure steam gauges **) PB=working pressure (gauge)

Calculation of the correct glass thickness

$$s = 0,55 \cdot d_m \cdot \sqrt{\frac{p \cdot S}{10 \cdot \sigma_{bB}}}$$

s : Theoretical minimum thickness in mm

d_m : $\frac{d_1 + d_2}{2}$ Mean diameter of gasket

d_1 : O.D. of glasses and gasket

d_2 : I.D. of gasket

p : Max. permissible working pressure (gauge) in bar

σ_{bB} : Minimum bending strength in N/mm²

S : Safety factor

Technical datas

Material:

Borosilicate glass, thermally prestressed, optically tested, properties as laid down in DIN and OeNORM.

Extract from the OeNORM: "Chemical pre-stressing of glasses is not permissible.

For safety reasons soda-lime glasses may not be used."

Resistance to bending strain:

$\geq 160 \text{ N/mm}^2$

Mean coefficient of linear expansion:

$\alpha_{20/300} \leq 4,5 \cdot 10^{-6} \cdot \text{K}^{-1}$, tested to DIN 52328.

Transition temperature:

$t_g = 550^\circ\text{C}$, tested to DIN 52324.

Chemical resistance

Alkali resistance:

alkali class 2, tested to ISO 675.

Water resistance:

hydrolytic class 1, tested ISO 719.

Acid resistance:

acid class 1, tested to DIN 12116.

moulded – ground – polished – thermally pre-stressed

Temperatur resistance:

suitable for temperatures from -273°C to $+300^\circ\text{C}$, size 31.75/12.7 up to 356°C
